

What is TurnAid?

TurnAid, is an in-bed patient turner with a unique combination of a powered turning sheet and two bed rails.

The system is controlled via a handset or a foot-controller, which rotates one roller at a time, causing the sheet to turn the person lying on it.

This reduces the strain of turning a person, as it is no longer just a manual task but a task simply controlled at the press of a button.

TurnAid is compatible with most profiling beds, even extra low beds, enabling greater flexibility.

TurnAid benefits:

Dignity and comfort: Increases service user dignity and comfort when being turned.

Cost effectiveness: Instead of 2-3 carers the system enables only one carer to turn a service user in bed.

Health and safety: Reduces the physical effort and strain for carers. Friction and shear is reduced when shifting clients - effectively minimising risks of tissue damage and pressure ulcers.

Target groups:

Bedridden persons with reduced physical, cognitive resources or reduced spatial awareness - such as,:

Bariatric persons: Reduction of pain when turned. Less risk of injuries and strain for carers.

Dementia patients: Where physical contact can lead to aggressive and agitated behaviour.

Paralysed patients: Reduction of pain when turned.

Other patient groups: Like for instance Multiple Sclerosis (MS), ALS, Parkinson's disease, brain damage, palliative patients etc.

Specifications:

<i>Total system weight:</i>	46 kg
<i>System measurements:</i>	<i>L: 190 cm, W: 10 cm, H: 57 cm</i>
<i>User weight maximum:</i>	200 kg
<i>Maximum work load:</i>	240 kg
<i>Power supply:</i>	230 V / 50 HZ
